EDUCATION

Bachelor of Technology in Computer Science (Artificial Intelligence)

Bennett University

August 2022 – June 2026

CGPA : 9.27

EXPERIENCE

Software Engineer Intern

May 2026 – Present

Dataflow Group

- Architected a serverless verification pipeline using AWS Step Functions, Amazon Bedrock, and ECS, automating 80% of manual case processing and cutting case turnaround time by 45%.
- Implemented Lambda-based routing logic mapping AI-generated JSON flags and ECS exit codes to 4 human review queues, boosting routing accuracy by 35% and lowering false insufficiency flags by 30%.
- Optimized Bedrock payload handling through a Python (Pillow) image compression utility and OCR prompt fixes, eliminating 100% of runtime API crashes and raising data extraction accuracy by 25%.

Full-Stack Developer Intern

August 2025 – April 2026

Syntalix

- Engineered a scalable Crowdfunding architecture using React Native and Expo, integrating secure payment gateways to maintain a 90% transaction success rate while shortening the checkout process by 40%.
- Fortified data integrity by architecting a robust gatekeeping system with protected routes, which ensured 100% profile completion for active accounts and drove a 35% drop in user onboarding errors.
- Leveraged RESTful APIs and optimized Django backend logic to resolve critical dependencies, slashing database query latency by 60% and increasing API throughput by 25% for real-time interactions.
- Revolutionized UX through a Glassmorphism overhaul using React and Tailwind CSS, implementing Optimistic UI patterns that increased user engagement by 45% and improved perceived interface responsiveness by 80%.

PROJECTS

Murmur | React.js, Tailwind CSS, Node.js, Express.js, Socket.IO, MongoDB 

May 2025 — June 2025

- Architected a full-stack MERN social media application with a secure RESTful API handling 50MB+ mixed-media payloads, implementing JWT authentication, bcrypt.js hashing, strict CORS, and Mongoose validation to mitigate NoSQL injection and XSS vectors.
- Integrated Socket.IO for real-time notifications and live messaging with reliable concurrent session syncing, improving user satisfaction scores by 80%.
- Built a client-side media pipeline using Cloudinary and FFmpeg.wasm that accelerated video uploads by 75%, and denormalized MongoDB schemas with embedded commenter data to speed up feed query execution.

Bail Reckoner | Next.js, Django, Python, Llama 3.1, Fast API 

November 2024– December 2024

- Developed and integrated 90% of core UI components, incorporating forms with immediate feedback and real-time data visualizations for enhanced video engagement analytics.
- Facilitated seamless data flow by developing 30% of FastAPI endpoints, integrating the frontend with an AI-driven legal database; this reduced manual data entry errors by approximately 10% for legal professionals.
- Enhanced the integration of 55% of real-time legal database access and AI-driven precedent matching, improving automated case law retrieval and strengthening judicial decision-making accuracy.

TECHNICAL SKILLS

Languages: Java, Python, C++, SQL , NoSQL(MongoDB), Dart, JavaScript, Typescript, HTML, CSS.

Frameworks: Flutter, Streamlit, React.js, Next.js, Node.js, Express.js, Tailwind CSS, React Native.

Developer Tools: Git, Gitlab, Kiro, AWS, VS Code, Expo, PyCharm, IntelliJ, Android Studio, Firebase,Tkinter.

CERTIFICATIONS

1. Algorithmic Toolbox 
2. Supervised Machine Learning 
3. Software Development Processes and Methodologies
